Using Hubshare as a Deal Room

Hubshare can function as a deal room, allowing you to store and share confidential business information

Features to aid a Deal Room

Access
Access Hubshare 24/7 on any device meaning you and your clients have access to the necessary data wherever and whenever.

High level security and Granular Rights
Secure your data with two factor authentication, a 256-bit AES SSL encryption and ISO27001 accreditations for our Azure datacentres meeting the highest security standards, on top of being fully GDPR compliant.

Granular Rights
Advanced user and group permissions with granular rights down to the document level so you can choose who sees what document and/or folders.

View only mode
Restrict document access to just viewing mode, so users cannot download or print (document watermarking being added in new preview module in 2020) but, you can scroll through all pages to view the document content.

User friendly and branding
Hubshare's intuitive and easy-to-use interface means minimal to no training is required, which is essential when working with many external parties. Having a branded portal that can be customised to suit a client's specific needs and branding can help show clients they are valued and increase brand awareness.

Document tools
- Notifications to alert you when a new comment has been made or a document uploaded.
- Our Advanced Search tool allows users to search across all Hub modules and pinpoint key information.
- Drag and drop & bulk upload, plus self-extract zip files for easy setup and document upload.

Task Management
Assign tasks to users to help monitor project progress, stay organised, meet deadlines and smash targets.
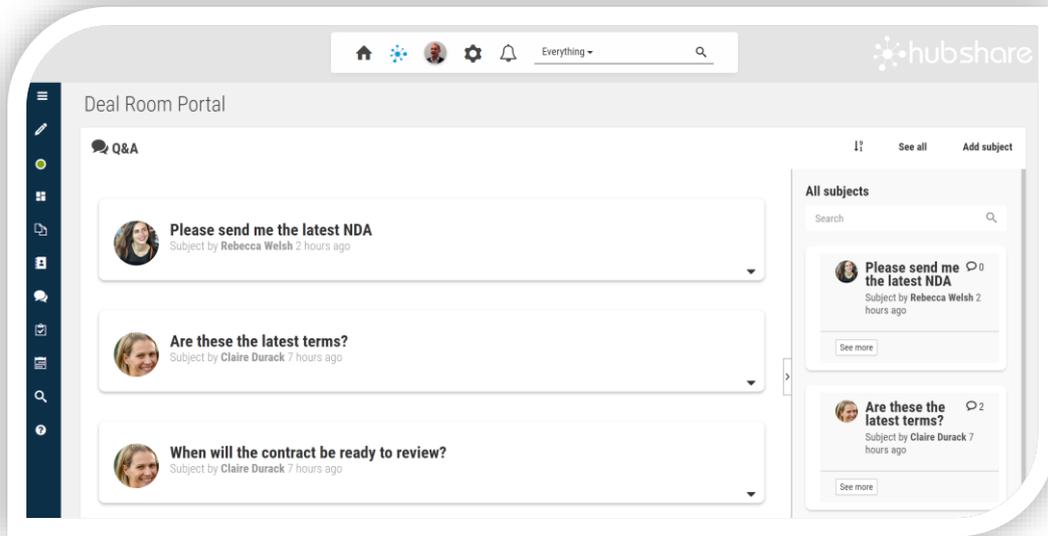

Integration
- Integrate with your Document Management Software to ease of sharing documents internally with external parties and for a streamlined workflow.
- Microsoft office integration lets users open and save files directly from within Word, Excel and PowerPoint (Office 365 integration available in 2020).

Document Reporting and Versioning
- Document versioning allowing you to track changes to document versions.
- Messaging area to post on for quicker collaboration (improvements coming in v3.2*).
- Audit reporting to show you who has accessed which documents.

Example images

Fig 1.1 - List view of messages/questions

Allow posting of messages, responding to messages and searching of any content within the message

Fig 1.2 - Expanded view of a particular question/message

Expand a particular subject to view all responses and comments

Fig 1.3 – Dashboard View

Keep up to date with documents, messages and tasks via the widget on the dashboard

Roadmap for 2020
*Enhancements to our Blog/Messaging module

Our 'Blogs' module is being enhanced to become more of a messaging area, so more about communicating and responding one to one, or one to many, rather than one way information sharing as it currently is. Each message currently is sent to everyone who rights to that module in the Hub. We will be enhancing this so you can send messages (and reply) to individual or groups, meaning others that have access to that module will not see the messages.

Each message has a subject currently and all responses are logged below this. This will continue and an ID will be added to each message. This allows better searching and referencing. Each message can then be exported and saved as a PDF, for example. The messaging area will also be used as a social workplace, allowing mentioning (@name) and liking of messages.

v3.1 – ETA June 2020

- Office 365 integration
    - Open in office online
- Hub Forms
    - Ability to create forms for data entry and view that data
- New enhanced document preview engine
- Project module enhancements
    - Quick edit in table view

v3.2 – ETA September 2020 – Spec TBC

- Enhancements to our blog/messaging module (planned inclusions)
    - One to one/one to many messaging
    - User rights added to messages
    - ID added to each message
    - Export message
    - @name mention
    - Add images, video and documents to messages
    - Like and favourite messages
